**DECLARATION OF GARY FANGER, PH.D.**

Assistant Commissioner of Patents  
Washington D.C. 20231

The undersigned, Gary Fanger, Ph.D., hereby declares:

1. I am a Scientist and Project Group Leader at Corixa Corporation, the assignee of the subject application. The following experiments were performed under my supervision.

2. In order to confirm L552S protein expression in various normal lung and lung cancer tissues, immunohistochemistry (IHC) analysis was performed using an affinity purified L552S polyclonal antibody. Specifically, tissue samples were fixed in a formalin solution for 12-24 hrs and embedded in paraffin before being sliced into 8 micron sections. Steam heat induced epitope retrieval (SHIER) in 0.1 M sodium citrate buffer (pH 6.0) was used for optimal staining conditions. Sections were incubated with 10% serum/PBS for 5 minutes. Primary antibody was added to each section for 25

minutes at indicated concentrations followed by a 25 minute incubation with an anti-rabbit biotinylated antibody. Endogenous peroxidase activity was blocked by three-1.5 minute incubations with hydrogen peroxidase. The avidin biotin complex/horse radish peroxidase (ABC/HRP) system was used along with DAB chromogen to visualize L552S expression. Slides were counterstained with hematoxylin to visualize cell nuclei. L552S polypeptide expression was detected in 10/12 lung adenocarcinoma samples, whereas no expression was detected in 13 normal lung samples evaluated. This expression pattern supports the use of L552S polypeptide as a cancer diagnostic marker.

3. The undersigned declares further that all statements made herein of his own knowledge are true and that all statements made on information and belief are believed to be true, and further that these statements were made with the knowledge that willful, false statements, and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code.
